EDUCATION

- **Westlake University** HangZhou, China
Intern - Yue Zhang's Lab Sept. 2022 - present
- **University of Edinburgh** Edinburgh, Scotland
MSc - Computer Science Sept. 2021 - Nov 2022 (expected)
Average Score: 72 (expected Distinction)
Core Courses: Machine Learning Practical, Machine Learning Theory, Accelerated Natural Language Processing, Text Technology and Data Science
- **Nanjing University of Science and Technology (NJUST)** Nanjing, China
BEng - Measurement and Control Sept. 2017 - June 2021
GPA: 3.5 (top 5%)
Core Courses: Signals and Systems, Error Theory, Data Structure and Algorithm

SKILLS SUMMARY

- **Programming Languages:** Python, JAVA
- **Frameworks:** Pytorch, NLTK, SpaCy, TensorFlow, Scikit
- **Skills:** SysAdmin (Linux, MacOS), Cloud Management (GCP)
- **Languages:** English (TOEFL 95), Mandarin

RESEARCH EXPERIENCE

- **Meta-Learning For Multi-Modal Cross-Lingual Transfer** Edinburgh
Master Thesis Project (Supervised by Prof. Frank Keller) May 2022 - Present
 - Shown current state-of-the-art pre-train models have poor performance in languages other than English in multi-modal cross-lingual tasks.
 - Proposed a novel **contrastive meta-learning fine-tuning framework**, combining existing supervised X-MAML and our proposed unsupervised Contrastive-MAML.
 - Boosted performance of various state-of-the-art pre-train multi-modal models in various multi-modal cross-lingual tasks.
 - Conducted a series of ablation studies to empirically proved the effect of each parts of the proposed method.
 - Preparing for EACL.
- **Improving Controlled Table-To-Text Generation Robustness** Edinburgh
Group Leader of Machine Learning Piratical Final Project Jan. 2022 - Present
 - Shown current state-of-the-art table-to-text methods have poor performance and robustness on noisy inputs
 - Proposed a novel training scheme by constructing noise in current controllable table-to-text dataset, then optimized it by reinforcement learning algorithm
 - Gained the results which are equal or even better compared with current state-of-the-art methods.
 - **IBM Third Place Prize** for Best Project in MLP Course
 - Submitted in **COLING2022** Rebuttal Score: 4-3-3

- **A Channel Mix Method For Fine-grained Cross-modal Retrieval** Nanjing
Research Assistant in PCA Lab of NJUST May 2021 - Sept. 2021
 - Worked on Fine-grained Cross-Modal retrieval task, which cross four modalities. Leveraging Mix-Channel Method to improve the interaction between modalities.
 - Gain significant improvement in all modalities in the fine-grained retrieval benchmark based on CUB200 dataset.
 - Research results included a paper accepted by **ICME2022**

OTHER PROJECTS

- **A Multi-Functional Fast Movie Search Engine:** We build a Movie Search Website, using VUE framework. Based on BM25 algorithm, we modified it, adding normalized score of authority computed by ratings and votes. Ranking the most related and qualified movies, celebrates for a given query. (March '22)
- **A U-net and K-Means Based Method For Brain Tumor Segmentation and Measurement:** Using U-net as baseline models for the tumor segmentation scenario, modified it for better matching this specific task, combining with K-Means methods for determining the severity of a tumor. (May '21)

HONORS AND AWARDS

- IBM Third Place Prize for Best Project in MLP Course - April, 2022 (Top **2%**)
- First Class School Scholarship, 2019 (awarded to **5%**)
- Second Class School Scholarship, 2019 (awarded to **10%**)
