### **Graduate Student, *Spatial Neuroscience Lab, UCSB & UCI*** July 2017 – Present

- Utilize Jupyter Notebook for fMRI data analysis and Vizard software for virtual reality data collection
- Design, develop, and conduct multiple projects on human navigation and mental rotation using psychophysics, neuroimaging, virtual reality, and computational models
- Map and research spatial abilities from the small scale of neural coding to the vista scale of visual motion perception, spatial disorientation, to the large scale of behavior in environments
- Analyze and interpret individual differences in spatial abilities from “nature” impacts of sex and handedness, to “nurture” impacts of strategy and aging, as well as to a broader impact of society from human evolution perspective

### **Graduate Student, *Social Perception Lab, Dartmouth College*** Sept. 2014– July 2016

- Utilized AFNI software for fMRI data analysis and transcranial current stimulation for data collection
- Designed and implemented an experiment on 85 subjects to investigate how the ability to remember faces can be improved by transcranial current stimulation (tDCS)
- Conducted multiple designed and programmed projects on face recognition and object recognition
- Developed and programmed 4 recognition tests, 2 prime tests, 2 Stroop tests, 5 quadrant, tests and 5 dual tests, recruited and tested over 200 subjects including 3 patients with acquired prosopagnosia
- Established a fine-grained series of visual cognition tests for preliminary identification of the brain region leading to prosopagnosia, as well as two parallel series of tests that dissociated face recognition from animal recognition

### **Research Assistant, *Visual and Auditory Cognition Lab, SCNU*** Nov. 2012 – June 2014

- Wrote senior thesis funded by the National Base of Psychology Research Program
- Designed, programmed, and implemented a project investigating how altered auditory stimuli influence the Ponzo illusion in different directions
