🧩 PROJECTS

Multimodal Sentiment Analysis

In SUTD

Brief introduction: Design effective multimodal fusion methods to improve the performance on sentiment analysis tasks

- Implement a bi-modal transformer-based and a mutual information guided model
- Achieve 1~3% improvement compared with SOTA

Relation Extraction in Dialog

In HKUST

Brief introduction: Work on the relation extraction task on the first dialog-style dataset

- Design and Implement a GNN-based model to learn meaningful hidden representations for the relation extraction task
- Achieve 8% higher F1 score compared with the baseline given in the original paper

Bayesian Optimization Based Network Pruning

In HKUST

Brief introduction: Design and finish an automatic flow that uses Bayesian optimization to prune a network in Tensorflow

- Integrate our methodology into PocketFlow open source library
- Tune the parameter and finally got 3-5% accuracy loss on Resnet for CIFAR10 dataset with pruning ratio of 50%
